RSD RemSoft.Dev

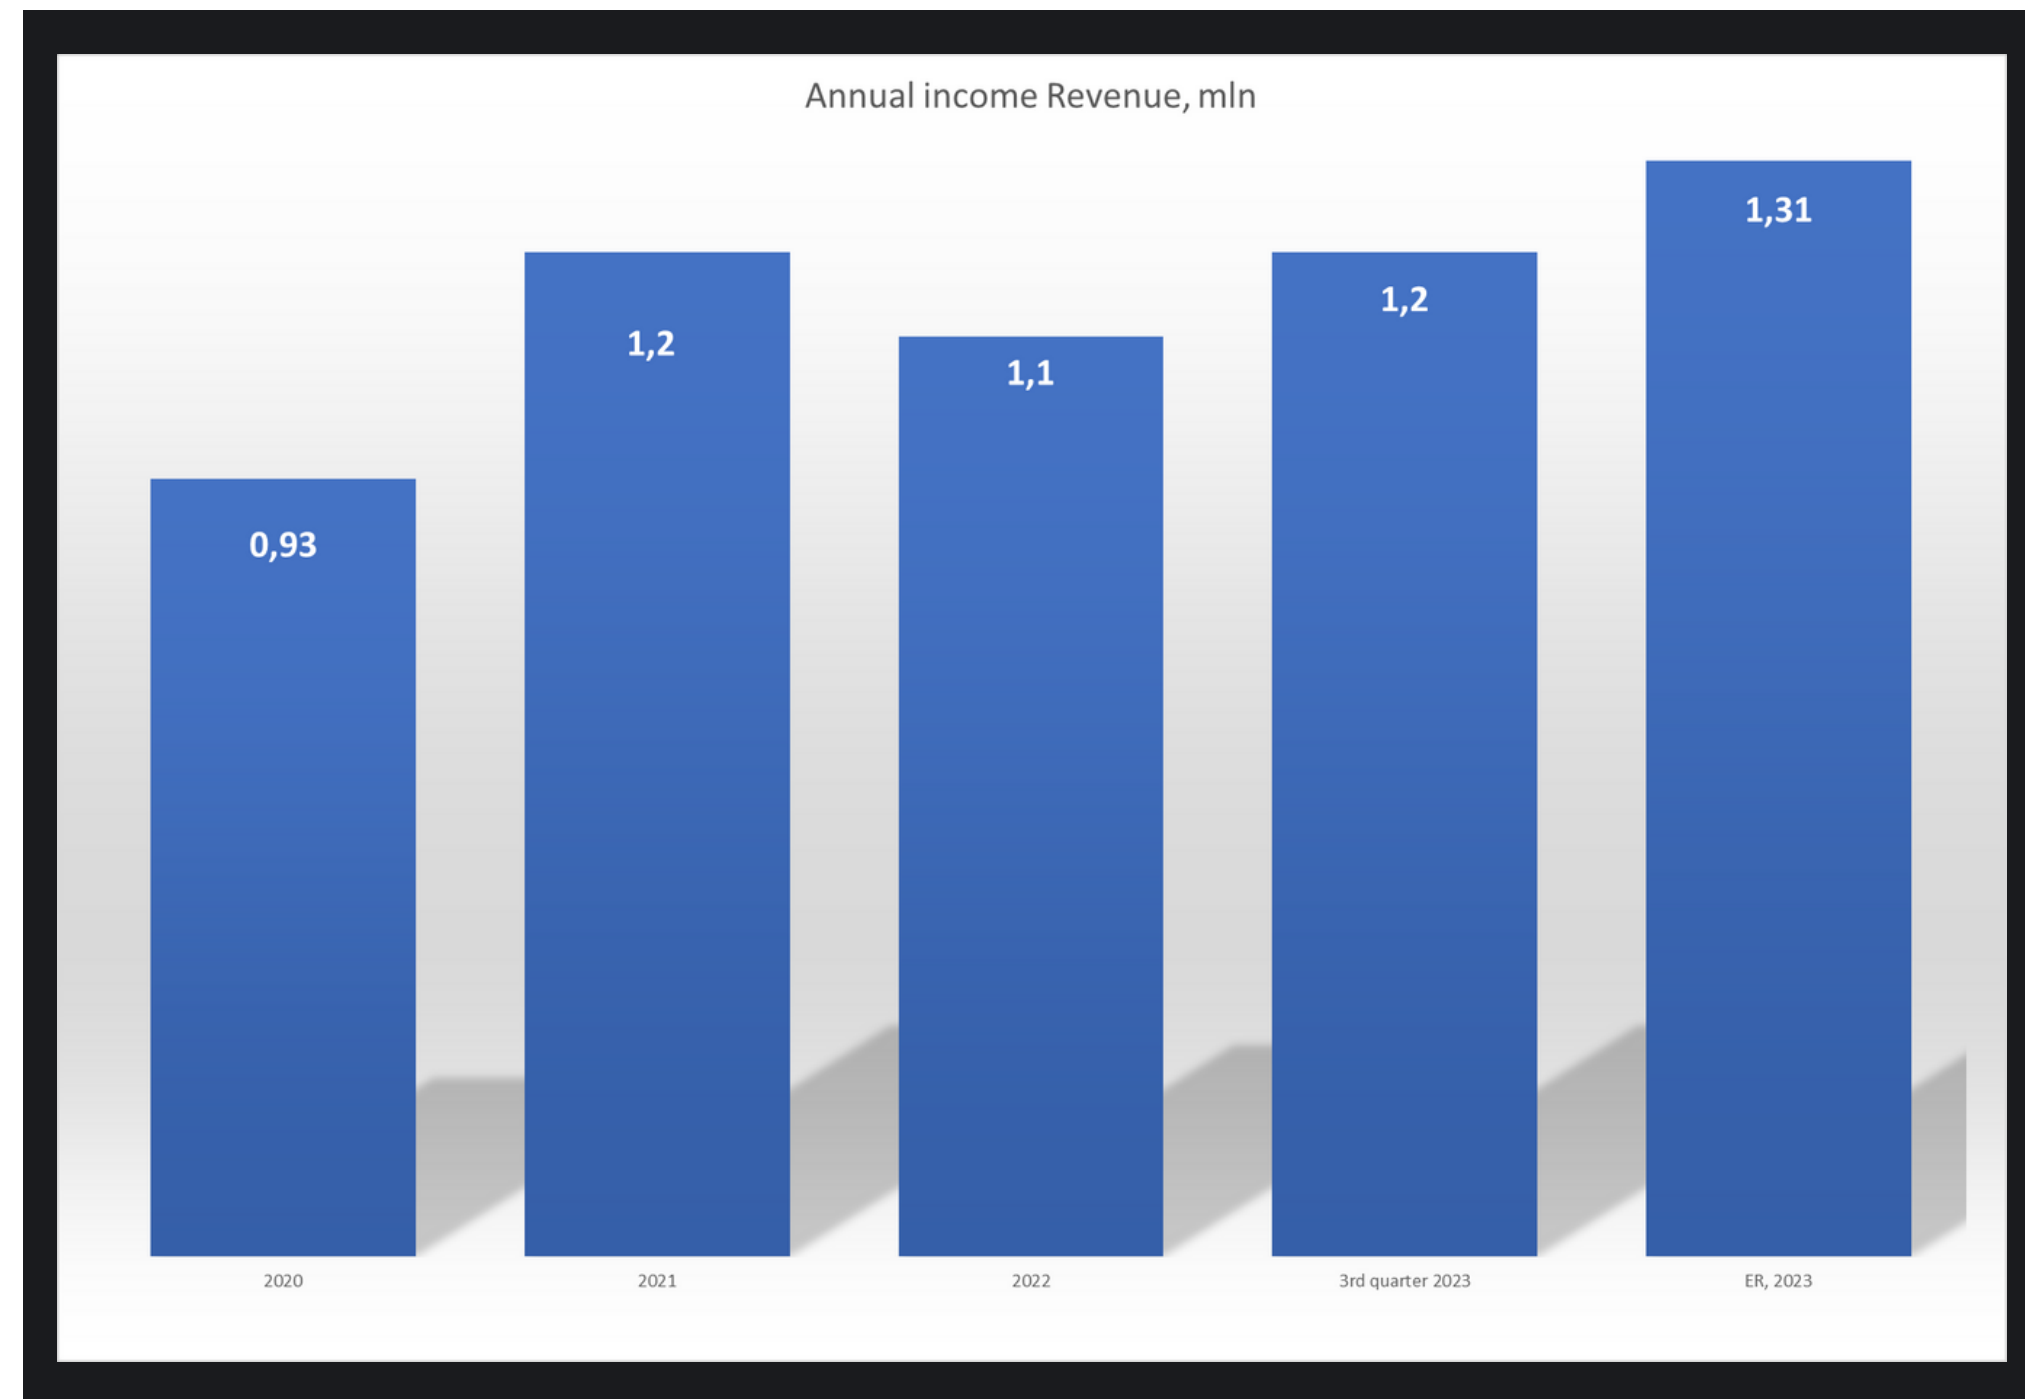

We build software that empowers organizations to effectively integrate their data, decisions, and operations.

Who we are?

History

Since 2017

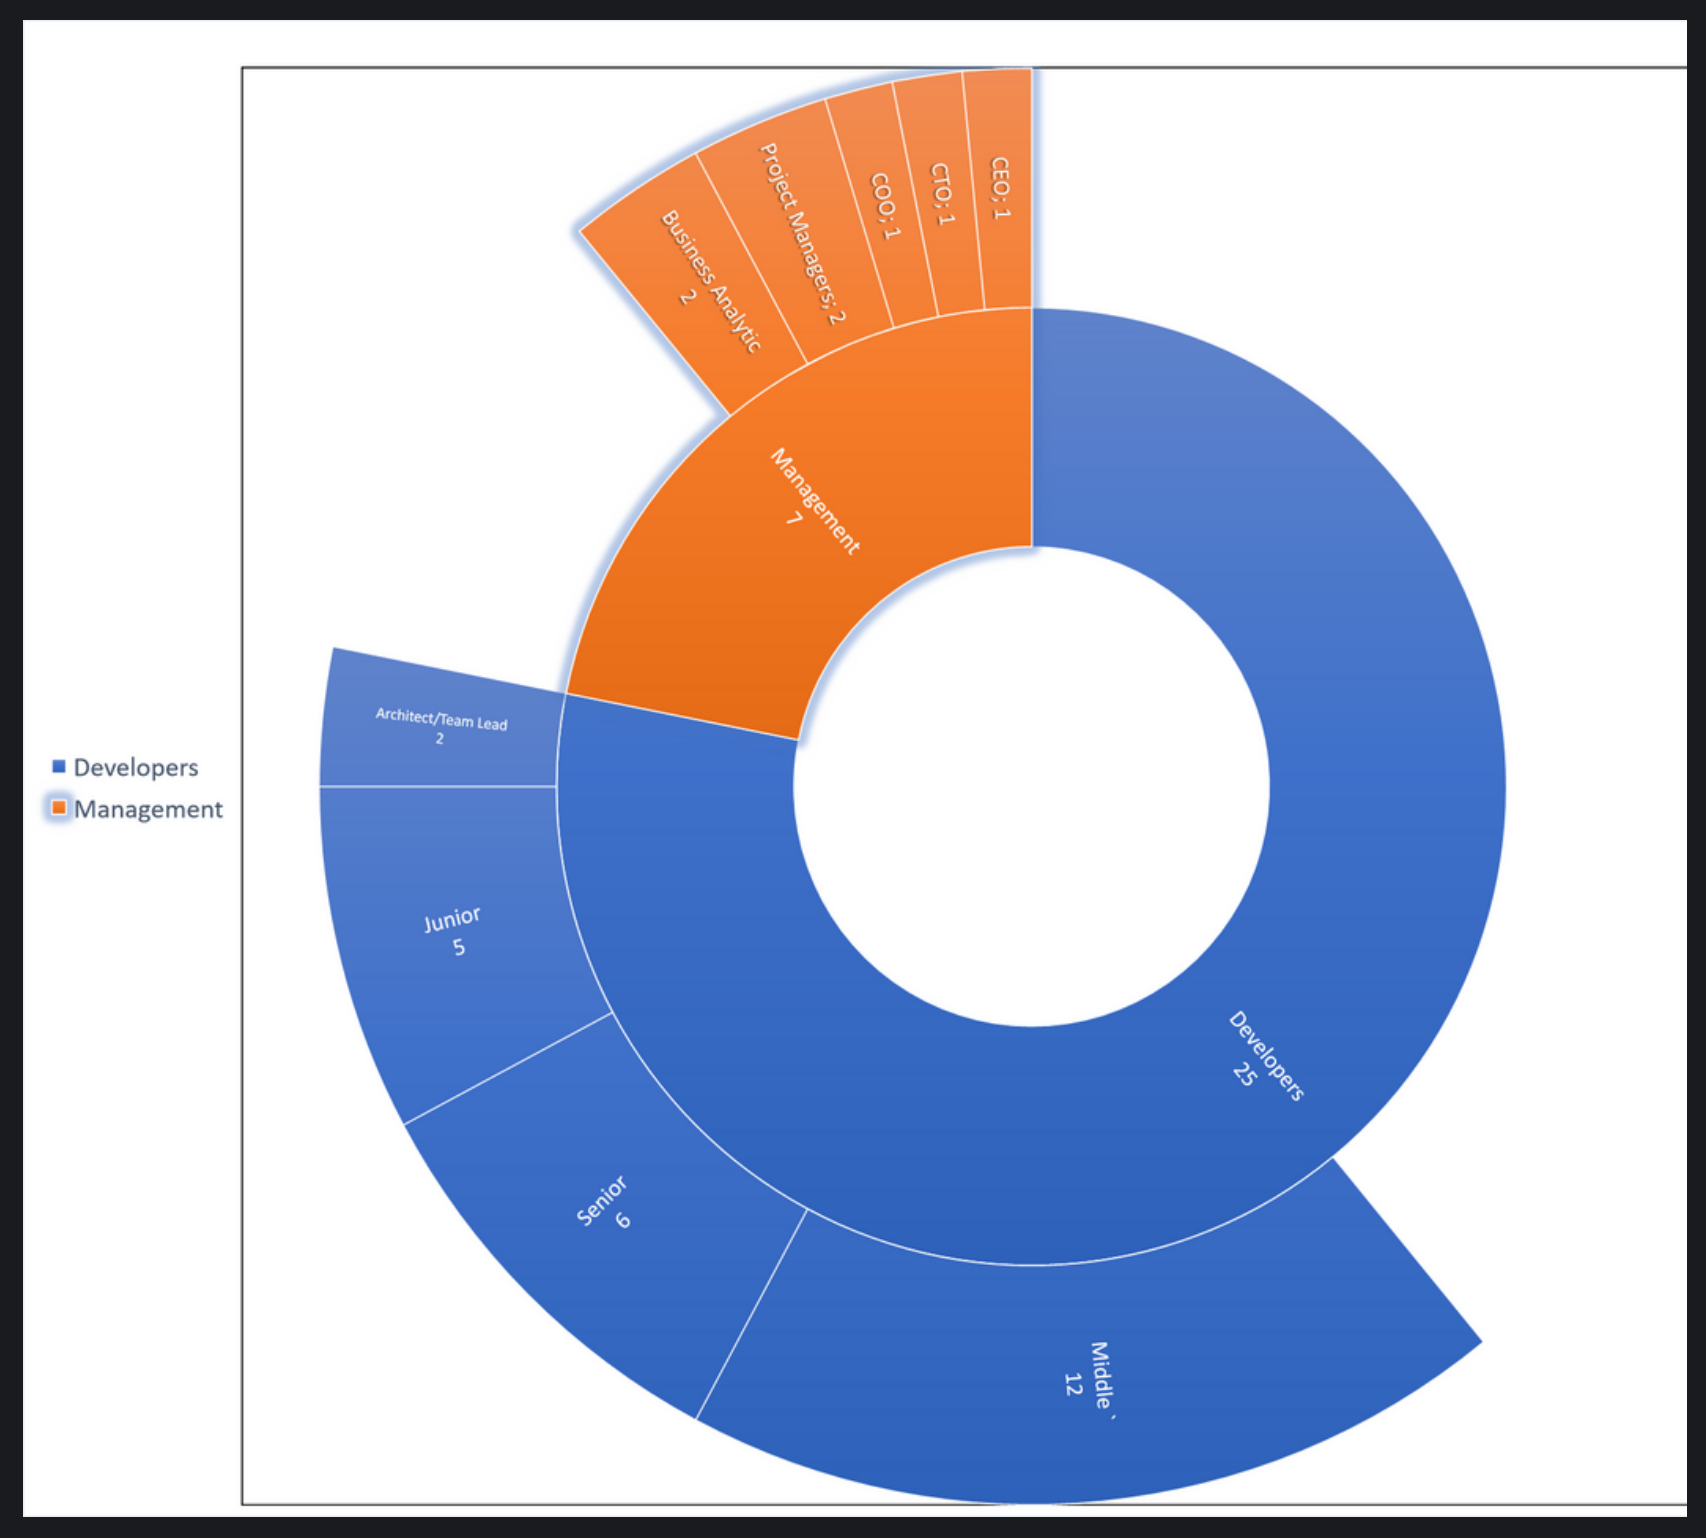

The company was founded in 2017. Initially, the company operated through Upwork, which became its main source of customers. In the process of formation, the company specialized itself and now works with Microsoft Stack technologies. During its existence, the company has developed more than 200 projects for its clients.

Company Structure

Employees

The company comprises 32 employees. More than half (72%) of the employees are developers of various levels: 2 Architects/Team Leads, 6 Senior Developers, 12 Middle Developers, and 5 Junior Developers. Twenty-eight percent (28%) of the company's employees are managers, including 2 Project Managers and 2 Business Analysts.

Network

50+ partners

The company has a broad network of partnerships. Among the partners are companies from the United States (5) and Ukraine (45). The partner network makes it easier to find the developers you need. Additionally, RemSoft.Dev has a pool of 400 developers who can be deployed for a client project in a short time (2 weeks).

What We Do

Our company provides B2B and B2C development services. We are mainly focused on the development of web, desktop and cross platform mobile applications and cloud infrastructure using Microsoft Stack technologies

Main technology Stack

Transformer configuration automation application

The RemSoft.Dev team developed both web and desktop applications entirely from the ground up. These applications are designed to handle Big Data and operate under high loads. The system is responsible for calculating the optimal configuration of voltage transformers based on input and output parameters. During these complex calculations, the applications handle hundreds of billions of computations, generating hundreds of gigabytes of logs and storing data in a database.

Web solution for energy company from the North Europe

The RemSoft.Dev team was responsible for upgrading the SiteCore version from 8.2 to 9.2, setting up a Helix structure, implementing full Azure DevOps CI/CD, and creating a VM for continuous development by other developers. The second part involved the development of web and mobile versions of the account for Skanska Energi customers.

Upgrade of the legacy code for an energy company

We conducted a comprehensive review of the current solution and automated processes, outlining our vision for optimizations and improvements that can be implemented for German energy company. We developed a DevOps component using Azure (PaaS approach) and Azure DevOps, and upgraded the code to address issues related to automated configuration and other challenges associated with automated build and deployment across various environments with different roles, and more.

Web solutions for a network of workspaces

We worked with the company, which is a network of workspaces that enables you to work wherever you need to be, in a productive, professional environment. Create a workplace that's right for your business today – and tomorrow – and thrive among a global business community.

Responsibilities at RemSoft.Dev included bug fixes, implementation of new features, creation of documentation, and unit tests. The main goal was to complete a completely new version of the site on time. This goal was successfully achieved, and the client was satisfied.

Custom software development for detecting defects on pipes

RemSoft developed a product that simplifies the process of detecting defects on pipes and cables using a patented approach. Our responsibilities included creating the architecture of the database and backend, utilizing minimal API from Microsoft and following best practices. The frontend part consisted of a web application for administrators and mobile apps on Android and iOS for technicians performing measurements in the field. The most challenging aspect was creating an offline mode for mobile apps, as technicians could work in areas without a mobile connection and needed to accurately merge data.

Automotive

Let's Put the
Power of Us
to Work for You

Developing of CRM System

The RemSoft.Dev team took on the responsibility of developing a brand-new project from the ground up for a client based in Canada. This project marked the company's entry into the startup realm, focusing on offering instant cash for supported cars. Leveraging company, which is powered by DRiVEQ, a world-class intelligence engine, the project aimed to enable more interconnected data and seamless integration of our solutions, surpassing previous capabilities.

XDalys.It

We worked with the marketplace, which sells parts for cars, where we completely redesigned the code for them. By building the site's architecture from scratch, we improved its user experience by 20%. A special component of the development was the fact that we worked with large amounts of data. We were engaged in a full development cycle from analyzing legacy code to building and implementing a new architecture.

Web and Mobile development

For a US client, we developed a web and mobile version for trading used cars. A specific challenge for us was implementing the client's program with the Copart auction. Thanks to the efforts of our team, we successfully integrated a modern CRM system to account for customers and requests from the client. This initiative contributed to the client's business growth by 20% within three months. Currently, we are solely focused on website support.

FinTech

Payment System AppyPay

RemSoft.Dev has created for our customer a one-stop solution for websites and apps to accept payments in Angola. AppyPay powers payments for a wide range of businesses, from online and in-person retailers to subscriptions and software platforms. Our .NET team, following Scrum, worked closely with business owners, assigned tasks, and collaborated with analysts, QA, and banks to create a pioneering payment gateway.

Payment System for Casino

The project encountered several challenges in terms of performance, including high consumption of CPU/RAM/DISK, inefficient database queries, manual production deployment, and a lack of SOLID/DRY principles in the code. The RemSoft.Dev team took charge of improving code quality, eliminating duplication, designing a new scalable architecture, migrating the project from on-premise to the cloud, updating the code, and implementing DevOps. This involved configuring environments for different roles, automating scripts and code fixes, creating pipelines on Octopus Deploy, managing versions, and resolving security issues.

HealthCare

IT Solutions

For Hospital Management

RemSoft.Dev has developed multiple applications for clinics in Europe and the USA. The applications encompass essential functionalities such as personnel management, patient administration, test scheduling, test result issuance, and doctor visit recording.

IT Solutions

For Hospital in Chicago

RemSoft.Dev developed an app. We built the end client's healthcare app from scratch and added new features after its first version.

The team was constantly in touch with the client and our company. If there were urgent tasks, they always agreed to perform, provided detailed updates, and offered feedback at each stage.

EdTech

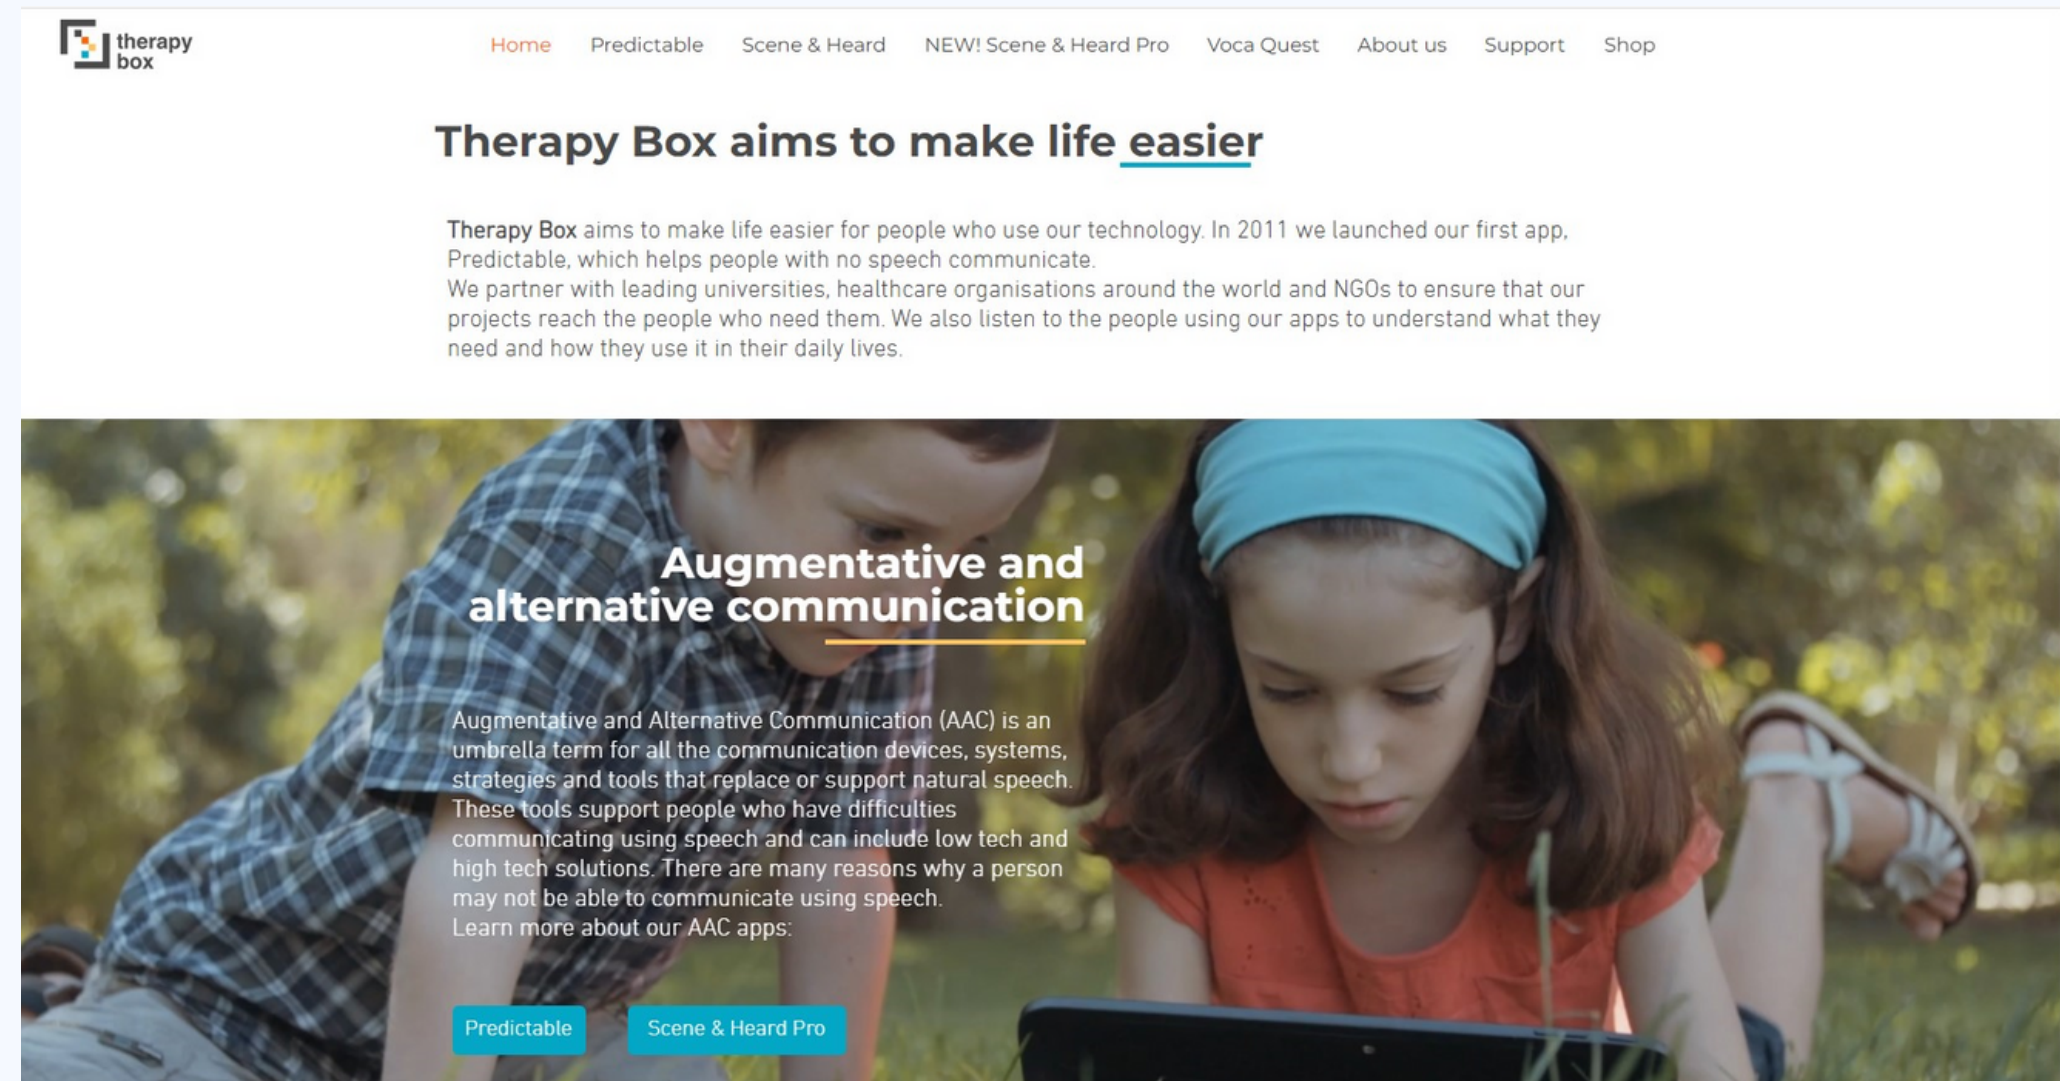

RapGame

The innovative scholarship game, aimed at improving children's pronunciation and rhythm skills, was created by RemSoft.Dev. This game includes 10 distinct activities with varying difficulty levels and encompasses over 300 pages of content. Children engage in tasks such as reciting poems, reading them aloud, crafting their own verses, and identifying and matching the correct rhythm patterns. Developed using the Electron and Razor Pages frameworks by RemSoft.Dev, the game is compatible with multiple platforms and offers a user-friendly interface.

Home Predictable Scene & Heard NEW! Scene & Heard Pro Voca Quest About us Support Shop

Therapy Box aims to make life easier

Therapy Box aims to make life easier for people who use our technology. In 2011 we launched our first app, Predictable, which helps people with no speech communicate. We partner with leading universities, healthcare organisations around the world and NGOs to ensure that our projects reach the people who need them. We also listen to the people using our apps to understand what they need and how they use it in their daily lives.

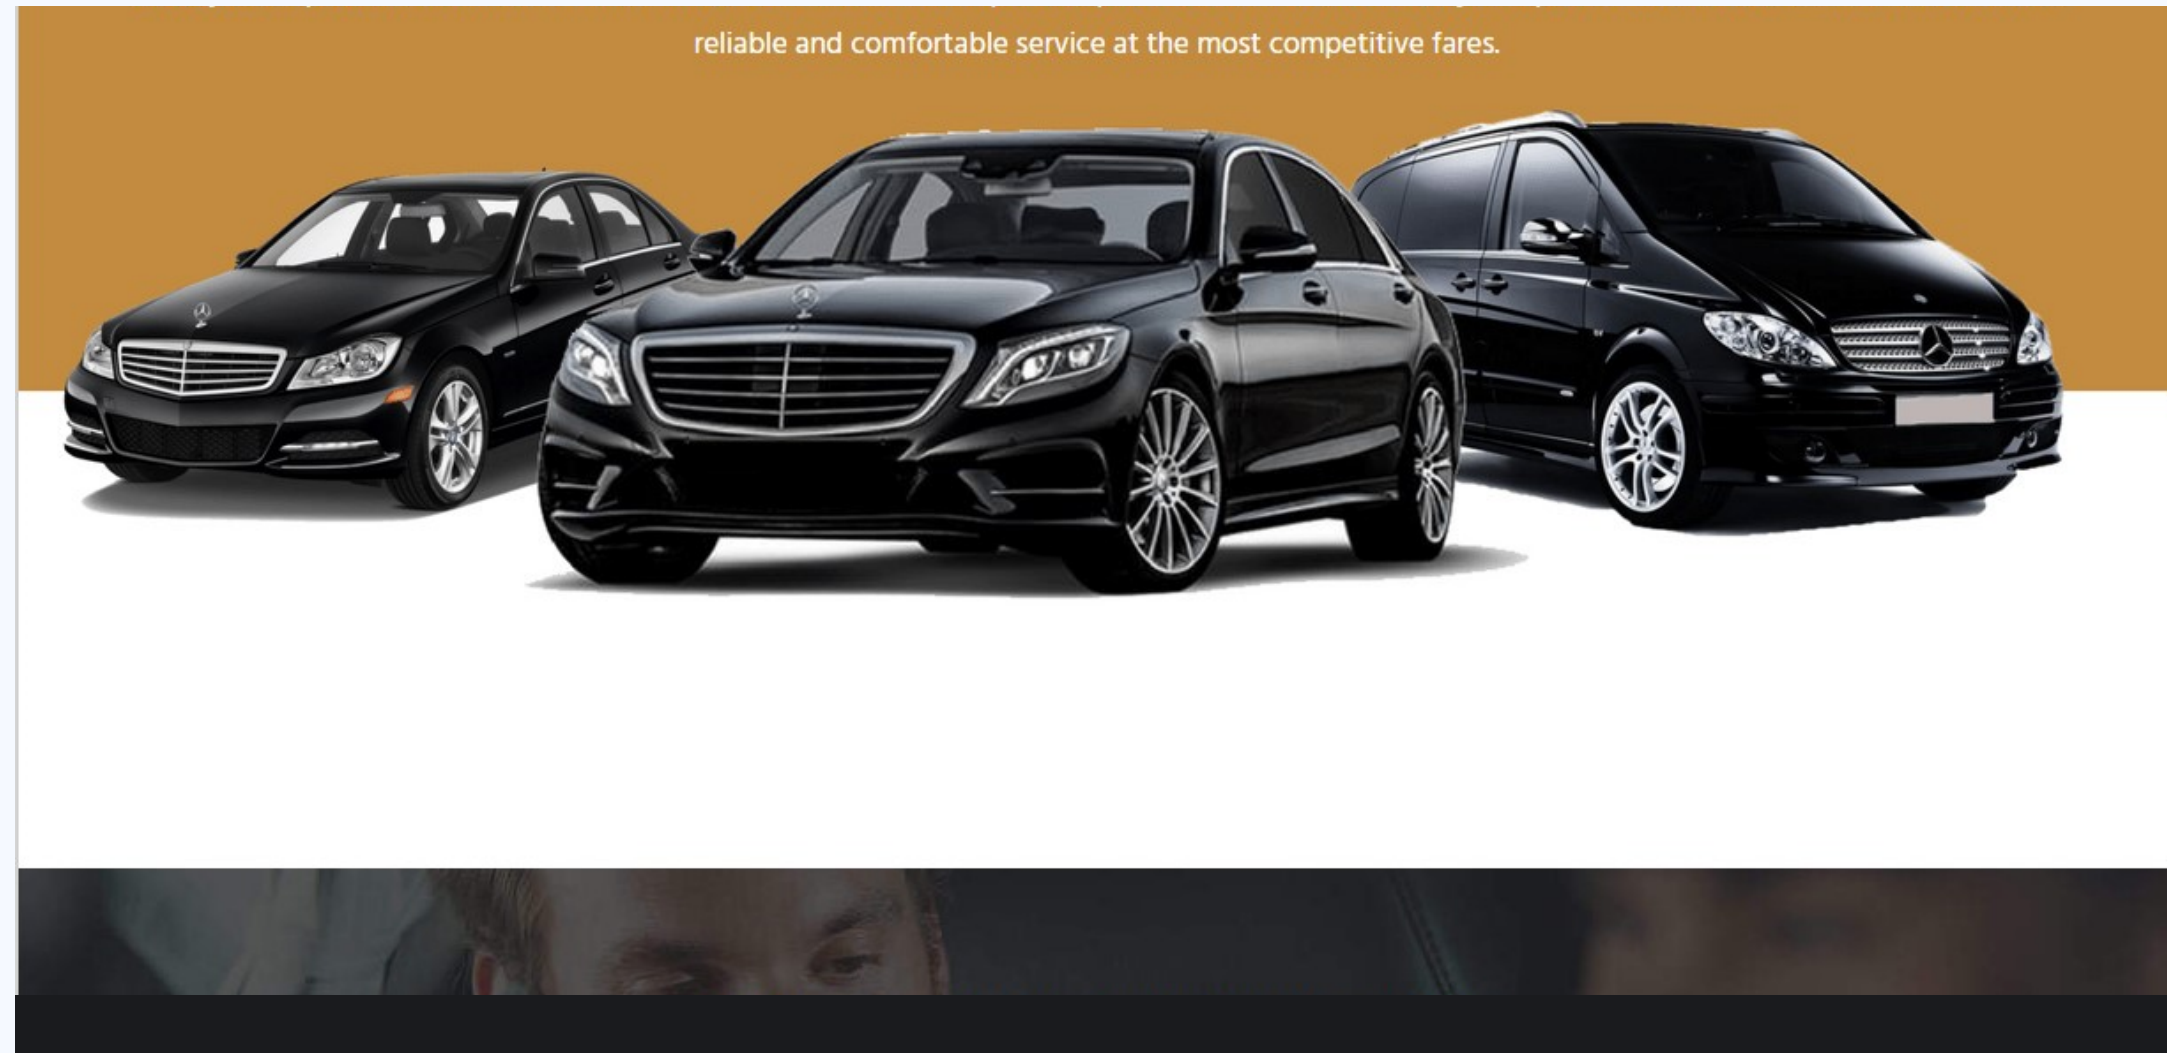

Augmentative and alternative communication

Augmentative and Alternative Communication (AAC) is an umbrella term for all the communication devices, systems, strategies and tools that replace or support natural speech. These tools support people who have difficulties communicating using speech and can include low tech and high tech solutions. There are many reasons why a person may not be able to communicate using speech. Learn more about our AAC apps:

Solution for taxi operators

RemSoft.dev developed a solution for taxi operators that offers optimization of efficiency. It calculates the most optimal car routes based on real-time road conditions, passenger locations, trip costs, trip combinations, services for individuals with disabilities, and numerous other ways to enhance the services, quality, and budget of taxi operators. The RemSoft.Dev team played a key role in developing this solution from the ground up.

Veloxy.io

We worked on a project for a USA startup in the sales industry. Our project involved developing a set of plugins for Gmail, Chrome, Outlook, Office 365 (cross-platform), iOS, and Android applications. These plugins enabled users to manage their sales activities and contacts within their email platforms. Additionally, we developed two websites: one replicating the plugins' functionality and another providing detailed analytics and insights for sales performance.

Software solution for processing and analyzing water quality from special sensors

RemSoft.Dev developed a custom application for IoT-enabled smart software solutions, generating transparent and actionable information in near-real-time for water utility operators. This enables them to make sustainable and robust operational and tactical decisions with confidence.

Crumbiz

Crumbiz is the place where owners of startups, investors, and connectors can establish effective cooperation.

Activity of RemSoft.Dev team included the development of the API based on restful architecture, combining classic and OData approaches. The front-end part was implemented using the newest Microsoft frameworks, Blazor Web Assembly, and .NET.
